

**11-5-2008 – For Immediate Release**

**ReNewBag Introduces new stronger reusable bag**

ReNewBag has introduced a new stronger reusable environmentally friendly bag. ReNewBag is the result of a new partnership of several companies in the packaging field. According to Terry Dane of Dane Packaging International; “The bag has been designed with the consumer and environment in mind.” Terry pulls from his experience as a 26 year veteran of the packaging industry. “ReNewBag has been designed by using the synergies of our partners and is a hybrid bag in the growing reusable bag market segment.” It is ideal for grocery shopping, travel, school or outdoor activities.

ReNewBag is made from new WPP material that is stronger and more durable than non-woven PP bags. WPP is Woven Polypropylene and uses woven propylene threads to create superior strength. The material also provides superior printing capabilities with vivid colors and graphics. Durable for many reuses, it can save 1000’s of throwaway bags over its lifetime. Soft yet strong handles make ReNewBag easy to carry even with the heaviest loads. The waterproof non-porous matte or glossy finish is easy to clean. ReNewBag is designed to stand up on its own for easy packing and folds up just like a paper bag to conserve space.

Initially ReNewBag is being offered in stock jumbo size with an earth and maple leaf print to emphasize the value to the environment. More sizes/prints are planned and custom prints are available.
